ABSTRACT

Nearly 200 national and international organizations which provide information and services related to the environment are described in this guide. Included are private groups, government agencies, professional organizations, foundations, publishers, and businesses. Listed for each source are the name, address, contact person, chief interests, kinds of help available, and the titles of publications and films. A subject guide and alphabetical index provide cross referencing. The directory concludes with a compilation of additional information sources and a bibliography of career information. (Author/WB)

CENTER FOR ENVIRONMENTAL EDUCATION

About the Center For Environmental Education

The Center for Environmental Education was established in 1972 to increase public awareness of environmental issues, develop comprehensive environmental education programs, and encourage citizen involvement in the improvement of environmental quality. This is accomplished through research either by the Center research staff or by qualified scientists and scholars funded through the Center. This research forms the substantive basis for the educational, legislative, and public awareness programs.

Major educational efforts focus on projects that call on citizens to play a key role in environmental strategies. These projects include: hands-on exhibits for children intended to create an awareness of the marine habitat; conferences designed to determine priorities in marine environment curricula; a radio program series on the marine environment that will be distributed across the U.S.

At present, the main emphasis of the Center is on issues affecting the marine ecosystem. The Center is concerned with the careful and competent management of our natural resources.

Special projects of the Center are the Whale Protection Fund, an international campaign to save the great whales, the Seal Rescue Fund, and the Sea Turtle Rescue Fund, established to ensure the protection of critical habitat areas and to curb illegal international trade which threatens the survival of this nearly extinct species.

The Center for Environmental Education has two primary publications: the *Environmental Education Report* and *The Whale Report.*

The *Environmental Education Report* is a unique resource guide for educators and other persons concerned with environmental issues. Regular columns provide suggestions for curriculum development and cover environmental legislation, conferences, workshops, international environmental concerns, and a calendar of events that are important to the issues.

The *Whale Report* is a quarterly newsletter designed to inform the 300,000 supporters of the Whale Protection Fund on current information concerning international whale conservation and related marine issues.

The Center for Environmental Education is private, non-profit, and supported solely by contributions of concerned citizens.

I. INTRODUCTION

To increase public awareness of the rapidly deteriorating environment was the goal of the environmental movement in the 1970's and DEMONSTRATE was the cry. This highly visible strategy was effective in drawing public attention. It led to the enactment of a plethora of laws and regulations and the creation of the U.S. Environmental Protection Agency.

One of the least known of the environmental laws was P.L. 91-516, the Environmental Education Act of 1970. It cited the need for "concerted efforts in educating citizens" about the deterioration of the nation's environmental quality and in its draft version offered one of the most comprehensive definitions of enivronmental education yet devised:

> Environmental education is an integrated process which deals with man's interrelationships with his natural and man-made surroundings, including the relation of population growth, pollution, resource allocation and depletion, conservation, technology, and urban and rural planning to the total human environment. Environmental education is a study of the factors influencing ecosystems, mental and physical health, living and working conditions, decaying cities, and population pressures. Environmental education is intended to promote among citizens the awareness and understanding of the environment, our relationship to it, and the concern and responsible action necessary to assure our survival and to improve the quality of life.

Besides defining environmental education, a federal Office of Environmental Education was created. State Coordinators of Environmental Education were named. A Subcommittee for Environmental Education was formed under the Federal Interagency Committee on Education. A national Alliance for Environmental Education was formed by many non-governmental organizations. And the Center for Environmental Education came into being to expedite the availability of resources for "educating and informing citizens."

Since 1973 the Center for Environmental Education has published the resource magazine *Environmental Education Report*, designed as a timely and reliable tool for environmental educators inside and outside the classroom. *Environmental Education Report* is responsive to educators' needs for substantive materials, innovative ideas, and lines to pursue for additional information.

The increase in the number and kinds of requests for information received weekly at the Center for Environmental Education attests to the public's heightened concerns about the environment. As public awareness increases so does the desire for knowledge. The environmentalist's cry of the 1980's may well become EDUCATE.

We at the Center for Environmental Education applaud the public's enthusiasm for learning how to keep our environment in balance. We offer this Resource Directory as a guide to the many organizations that are involved in one way or another with environmental education. It is not exhaustive because the sources are as infinite as the subject they illuminate. We hope, however, that one source will suggest another and this Directory will serve as the starting point for many fruitful investigations.

II. USER'S GUIDE

This directory has been cross-referenced three ways to make it as accessible as possible.

Information at a Glance (beginning on page 3) lists 279 information sources alphabetically and by name only. Bullets (•) following the names indicate help available in any of 11 different areas from audiovisuals to workshops.

The Subject Guide (beginning on page 13) groups the 279 information sources under 20 different environmental interest categories; e.g., the arts, the built environment, conservation.

The *Directory* (beginning on page 19) provides the most detailed information about each source: name, address, contact person, chief interests, kinds of help available, and the names of publications and films.

The directory concludes with a listing of "Additional Sources of Information" (page 52), and a "Bibliography of Career Information" (beginning on page 53).

It is expected this directory will be used only as a starting point. The Center for Environmental Education welcomes additions and corrections for future editions of the *Directory of Environmental Education Resources.*
